#### **DETAILED ACTION**

## **Drawings**

1. The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on September 22, 2002 have been approved. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application.

# Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-2, 9, 14, and 16-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Moe et al. (US 5,659,851).

Moe et al. disclose applicants' claimed invention, specifically teaching a web tracking apparatus (10) and a method of web tracking adjustment, for guiding a moving web/photoconductor loop (12) in a predetermined path of travel relative to a stationary frame (84)(col. 7, lines 6-8), comprising:

- a gimbaled steering roller (14) having a lateral constraint (61A)(62A);
- a means for biasing (80) in a gimbal direction (56);
- a means for adjusting (94)(96);
- a roller shaft (59); and
- a stop (88)(col. 9, lines 2-4).

4. Claims 1 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Morse (US 3,913,813: ref. 4 in form PTO-1449).

Morse discloses applicants' claimed invention, specifically teaching a method of web tracking adjustment, for guiding a moving web (15) in a predetermined path of travel relative to a stationary frame (53), comprising:

biasing (61) a steering roller (11) in a gimbal direction (20); adjusting the bias (60)(70)(72); mounting the steering roller to the stationary frame (53)(col. 6, lines 1-3); and pivoting the steering roller about a caster axis (30)(col. 6, lines 15-20).

5. Claims 1 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Morse et al. (US 3,608,796).

Morse et al. disclose applicants' claimed invention, specifically teaching a method of web tracking adjustment, for guiding a moving web (16) in a predetermined path of travel relative to a stationary frame (14), comprising:

biasing (40)(52) a steering roller (2) in a gimbal direction (34);

adjusting the bias (36)(44)(46);

mounting the steering roller to the stationary frame [see Fig. 1, where (12) mounts (2) to (14)]; and

pivoting the steering roller about a caster axis (32).

# Allowable Subject Matter

6. Claims 3-7, 10-13, 15, and 19-20 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record, taken as a whole, fails to disclose or render obvious a method of web tracking adjustment or a web tracking apparatus comprising all the limitations claimed, including an edge guide that is axially slidable as recited in claims 3, 15, and 19, an end two of the spring that is mounted to one end of the steering roller such that the spring applies a rotational force as recited in claims 4 and 11, and a shaft that is mounted to the housing by spring flexures as recited in claims 7, 10, and 20.

#### Response to Arguments

8. Applicants' arguments filed September 22, 2002 have been fully considered but they are not persuasive. Moe et al. (US 5,659,851) discloses biasing the steering roller (14) in the gimbal direction (56) through the use of springs (80). Morse (US 3,913,813) discloses biasing the steering roller (11) in the gimbal direction (20) through the use of the resilient wire (61). Morse et al. (US 3,608,796) discloses biasing the steering roller (2) in the gimbal direction (34) through the use of the flexure arm (40) and the U-shaped spring bracket (52). Moe et al., Morse, and Morse et al., all teach the pivoting of the steering roller about the gimbal axis.

### Conclusion

9. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 3654

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
